

SERVICES

SI Security Health Check for SMBs

Secure your business with the SI Security Health Check for SMBs, a comprehensive service tailored for small to medium-sized businesses. Our expert consultants will work collaboratively with you and your team to develop a high-level cyber security maturity roadmap, and identify areas for future focus, prioritise follow-up projects, and provide personalised recommendations for cost-effective solutions and long-term support to keep your business safe in today's digital age.

How is the SI approach different?

In today's digital age, cyber security is more important than ever, and small to medium-sized businesses (SMBs) are increasingly becoming a target for cyber criminals. The SI Security Health Check is designed specifically for SMBs and is aimed at identifying prioritised areas of improvement within your organisation's overall cyber security posture. Our expert, GIAC-certified consultants are highly qualified with multidisciplinary backgrounds and will work with you to develop a high-level, targeted roadmap to defend your business from cyber threats.

How can we help you?

We begin by truly understanding you, assessing your cyber culture, security policies, procedures, and technical controls. This assessment is conducted holistically, covering all areas of your organisation that could be at risk of cyber attacks. These are the foundations and we will evaluate where improvement is needed.

This service is tailored for growing organisations that have not yet been able to achieve high levels of cyber security maturity and stops short of

potentially costly 'outside-in' vulnerability or penetration tests that, whilst identify vulnerabilities, may not prove cost-effective as a means of reducing overall risk.

Workshop structure

SI Security Health Checks typically take the form of one to three days of on-site or online workshops. Our team will walk you through tried and tested exercises to explore your organisation's cyber security posture, identify risks and opportunities, and collaboratively explore solutions.

Building a picture of risk

During the workshops, we will consider the most critical risks that your organisation faces and recommend steps to mitigate these. If a risk register does not already exist, we will create one during the workshops and add items as they are identified.

Actionable recommendations

We will help you identify "quick wins" or small changes that could be implemented quickly to address significant risks identified. Our goal here is to provide actionable recommendations that can be implemented immediately to meaningfully improve your organisation's cyber security posture.

Follow-up projects

We will collaboratively prioritise a list of follow-up projects that we have identified through conversation. These projects will be based on your organisation's specific needs and will be tailored to your budget and timeline.

Building a roadmap

Our experts will collaborate with you and your team to develop a high-level cyber security roadmap tailored to your organisation. We believe that cyber security is an ongoing process, and we are committed to working with you to ensure that your business is always protected from cyber threats.

Supplier and partner recommendations

Whilst we would be pleased to support you in delivering many of the projects identified, we want to ensure you have the right teams for the right projects. Our consultants will provide recommendations for partners and suppliers from across the industry to support you in the delivery of your roadmap, based on their experience and extensive industry connections. We understand that every business and team is unique, and our recommendations will be tailored to your specific

needs. We believe in building long-term relationships with our clients and will work with you every step of the way to ensure that your strategy is effective and up to date.

This service is designed to provide cost-effective solutions that will help progress your cyber maturity and help defend your organisation from cyber threats. We understand the unique challenges that SMBs face when it comes to cyber security and are committed to providing custom-made solutions that genuinely impact your business. Contact us today to schedule a consultation and take the next step in securing your business.
